DT Curriculum Coverage

Design and technology is an inspiring, rigorous and practical subject. Using creativity and imagination, pupils design and make products that solve real and relevant problems within a variety of contexts, considering their own and others' needs, wants and values. They acquire a broad range of subject knowledge and draw on disciplines such as mathematics, science, engineering, computing and art. Pupils learn how to take risks, becoming resourceful, innovative, enterprising and capable citizens. Through the evaluation of past and present design and technology, they develop a critical understanding of its impact on daily life and the wider world. High-quality design and technology education makes an essential contribution to the creativity, culture, wealth and well-being of the nation.

The national curriculum for design and technology aims to ensure that all pupils: 4 develop the creative, technical and practical expertise needed to perform everyday tasks confidently and to participate successfully in an increasingly technological world & build and apply a repertoire of knowledge, understanding and skills in order to design and make high-quality prototypes and products for a wide range of users & critique, evaluate and test their ideas and products and the work of others & understand and apply the principles of nutrition and learn how to cook.

Kev DT skills

Design:

Make appropriate suggestions for the appearance and materials for an item, consider how it will be made.

Choosing and using the appropriate tools, equipment and resources to make high quality prototypes and products following the design.

Critique, evaluate and test ideas and products, suggesting ideas for improvements and explaining how the product is suitable for purpose.

Technical knowledge:

Use and apply knowledge of materials, fixings and linkages to reinforce structures and build models with moving

Food and nutrition:

Understand the principles of nutrition and healthy eating, use basic techniques for food preparation and cooking.

Areas to be covered: food, textiles, construction, technological developments. These should incorporate: health & safety, design, electronics & electricals, mechanics & engineering, tools & equipment.

Subject Non- Negotiables –

Skills and knowledge components:

Progression document building from previous year's learning

						Communicate ideas through oral and ICT presentations. Adapt designs, where necessary, based of design feedback.
Make	Name the tools they are using and know how to use them safely. Use given tools to cut, shape, join and finish products. Explore different materials and components to find appropriate ways of joining materials.	Select and name appropriate tools and equipment needed from a given range. Know which equipment is used for cutting, shaping joining and finishing. Select from a wide range of materials and components, depending on use.	Select and name appropriate tools and equipment needed from a suggested range Know and choose which equipment is used for cutting, shaping joining and finishing from a suggested range. Know some characteristics of materials and components and select from a wide range of these, depending on use.	Select and name appropriate tools and equipment needed Know and choose which equipment is used for cutting, shaping joining and finishing. Know the characteristics of materials and components and select, depending on use.	Select, name and use appropriate tools and equipment safely and accurately. Use some specialist equipment accurately and safely. Select from and use a range of specific materials and components according to their specific use and appearance	Select from and use a wider range of specialist tools and equipment. Use specialist equipment for a specific purpose accurately and safely. Select from and use a wider range of specific materials and components according to their use and aesthetic properties.
Evaluate	Explore, investigate and use existing products. Say whether or not their product does the job it is supposed to. Explain why their product is good.	Explore and evaluate existing products. Say why a product is good (or not) and what job it does (and if it good / bad at this job). Evaluate their product against their design criteria.	Explore and analyse existing products. Consider why products are good (or not) and how effective they are at meeting their purpose. Suggest ways of improving their own and others' work. Consider how some products have helped the world.	Explore and analyse existing products against a set of criteria. Consider how products were made, why they are good (or not) and how effective they are at meeting their purpose. Suggest ways of improving their own and others' work based on how effective the product is. Consider how some people and products have helped the world.	Investigate, explore and analyse a range of existing products based on a set of criteria. Evaluate their ideas, prototypes and products against a specific set of criteria. Suggest ways of improving their own and others' work, using their criteria Consider how some people and products have changed the world.	Investigate and explore a range of existing products, considering construction and purpose. Evaluate their ideas, prototypes and products against a specific set of criteria they have devised. Suggest ways of improving own and others' work, using specific criteria. Identify and understand how key events and
